

Chloride threshold values

Meeting with the reference group

12 October 2011

Test methods

- Potentiostatic method (fixed potential)
- Free potential method (open circuit)
- RRT with RILEM TC 235 CTC method

Potentiostatic method

Test setup

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Potentiostatic method

- **Treatment of reinforcement bars:**
 - Pre-rusted
 - Citric acid, then repassivated in $\text{Ca}(\text{OH})_2$ solution
- **Potentials representing typical values for:**
 - Seawater splash zone (100mV CSE)
 - Submerged seawater zone (-150mV CSE)

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Potentiostatic method

Potentiostat

Concrete specimens with rebars and epoxy coating

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Free potential method

Test setup

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Free potential method

Concrete specimens with rebars and epoxy coating

Datalogger

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Concrete mix design

- Powder: Rapid cement (75%) and fly ash (25%)
- Eqv. w/c = 0.45 (w/b = 0.40)
- Aggregate: Granitic ($D_{\max} = 8 \text{ mm}$)
- No additives in order to know the exact chemistry of the cement paste
- Target slump: 100 – 200 mm

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Final mix design

Material	Density	[kg/m ³] SSD	[liter/m ³]
Rapid cement	3160	382	121
Fly ash	2300	127	55
Rønne 0/2 mm	2630	720	274
Rønne 4/8 mm	2710	907	335
Water	1000	200	200
Air			15
Total		2336	1000
Eqv. w/c	0.45		
Slump flow	110 mm		

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Concrete mixing

Concrete mixing station

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Casting

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Cutting

To ensure uni-directional ingress:
All surfaces are sealed with epoxy,
except the ones to be exposed.

Cutting

Cover depths

- 5 mm
- 15 mm

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Sample ID and test methods

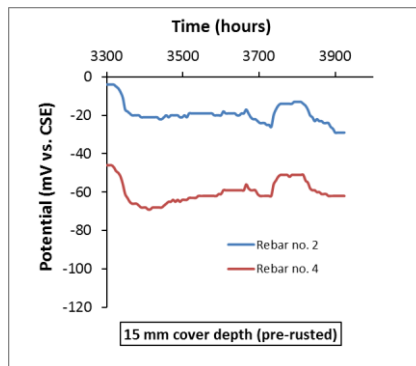

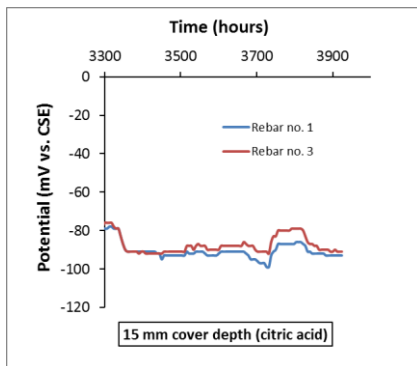

75% Rapid cement + 25% fly ash, eqv. w/c = 0.45

Sample ID	Method			Cover depth	Channel no.	Rebar treatment	Date of corrosion initiation
	Free potential	Fixed pot. 100 mV	Fixed pot. -150 mV				
S1F/5/1+3	x			15	1+3	Citric acid	
S1F/5/2+4	x			15	2+4	Rusted	
S1F/5/5+7	x			15	5+7	Citric acid	
S1F/5/6+8	x			15	6+8	Rusted	
S1F/15/1+3	x			5	9+11	Citric acid	
S1F/15/2+4	x			5	10+12	Rusted	
S1F/15/5+7	x			5	13+15	Citric acid	
S1F/15/6+8	x			5	14+16	Rusted	
S1P100/5/1+3		x		5	1+3	Citric acid	
S1P100/5/2+4		x		5	2+4	Rusted	
S1P100/5/5+7		x		5	5+7	Citric acid	
S1P100/5/6+8		x		5	6+8	Rusted	
S1P-150/5/1+3			x	5	1+3	Citric acid	
S1P-150/5/2+4			x	5	2+4	Rusted	
S1P-150/5/5+7			x	5	5+7	Citric acid	
S1P-150/5/6+8			x	5	6+8	Rusted	

Meeting with the reference group of the Expertcentre, Danish Technological Institute, October 12, 2011

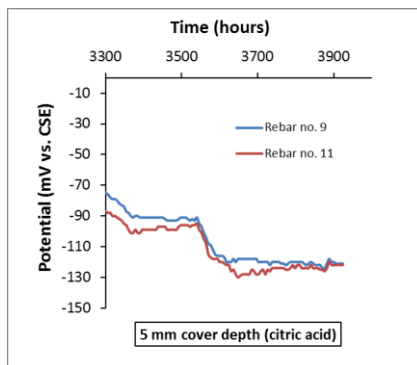

Free potential method

- Corrosion on-set will be detected by significant change in potential
- No indication of corrosion after 5 months of exposure.

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

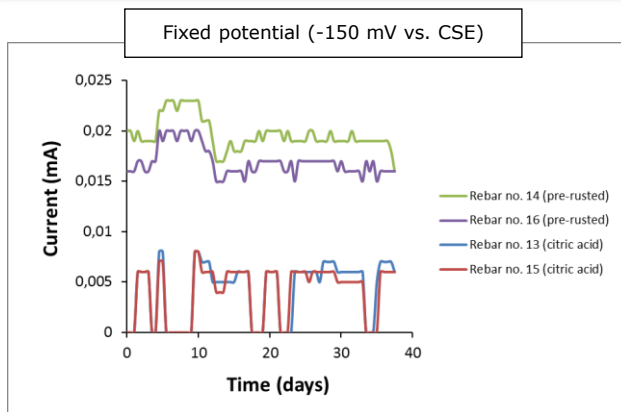

Free potential method

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Potentiostatic method

- Corrosion on-set will be detected by significant increase in current
- No indications of corrosion observed after 4 months of exposure

*Example of
measurements*

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Chloride profile sampling

Sampling procedure

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Test of chloride ingress

- No indications of corrosion onset after about 5 months
- Test of chloride ingress:
 - test of chloride ingress with 0.1 M AgNO_3 solution (spray-test)
 - two chloride profiles (profile grinding and titration)

*Specimen from free potential
setup with 15 mm cover depth*

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Test of chloride ingress

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Chloride profile sampling

Cover depth: 15 mm

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Chloride profile sampling

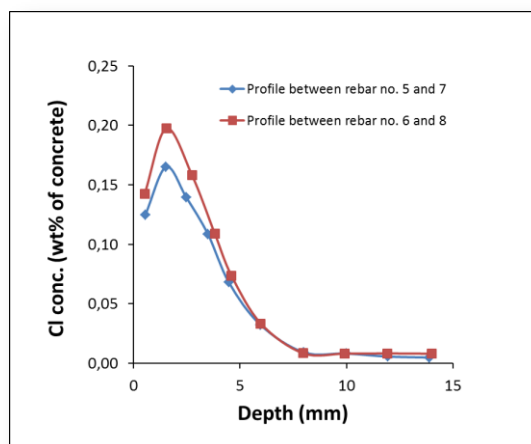

- 0 to 5 mm: Sampling in 1 mm intervals
- 5 to 15 mm: Sampling in 2 mm intervals

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011

Chloride profiles

After 153 days of exposure in 6% NaCl solution (at 20°C)

Meeting with reference group of the Expertcentre, DTU Byg, October 12, 2011
